

Let's Build Your New Equestrian Riding Arena with Steel

NATIONAL BUILDING GROUP

Pre-Engineered Building Solutions

Need to build a new equestrian riding arena, the best results begin with National Building Group. We can build or expand your riding arena to meet your needs. Our Steel Buildings allows you to work within your budget and you'll have a strong building to provide a safe and healthy home for your horses.

Horse owners need indoor riding space, and a steel arena is the answer! Steel provides the required strength to facilitate the large open span area required for ample riding room. Steel frame engineering enables us to design an arena with no obstructions, a clear-span space of up to 300 feet wide is available. The flexibility and ability to place stalls, offices, bleachers or any other needed rooms are easily accomplished.

Steel is highly resistant to problems caused by issues like mold, mildew, termites and other destructive insects. Steel simply lasts longer and requires less maintenance than other building materials. Building your riding arena with steel provides the strength and durability to hold up under weather conditions such as high winds and heavy rain or snow fall. The bottom line is Greater protection for occupants and horses within.

Metal riding arenas when insulated provide resistance to condensation and moisture for a healthy environment. Tight connection of metal construction allows for climate control where needed whether it be for the entire building or specific areas of enclosure inside of it.

Since steel is fire-resistant it provides greater protection making it a safer choice for construction.

Our engineering teams use the latest technologies and advancements in the industry to design and develop your building to meet or exceed the required local and national building codes.

Once we process your order it goes into production and upon completion will be shipped directly to your farm.

Erection can be done through our builder network or with your own contractor. Most projects are completed in 8 to 10 weeks, and we can provide turn-key services.

Our steel frame buildings easily facilitate the use of traditional building materials such as wood, brick, stone, stucco and glass to provide our clients with the look they are trying to achieve for their project.

National Building Group puts your needs first!

Our team has you covered, our Economics, Safety and Design sure makes us "The Real Deal For Steel"
